EMPLOYEE EXPERIENCE PROJECT

Aim

To develop a Java program that accepts employee details and calculates the employee's experience in years, months, and days using the joining date.

Technologies / Concepts Used

Java, Scanner, LocalDate, Period, DateTimeFormatter, exception handling, and date validation.

Source Code

```
import java.time.LocalDate;
import java.time.Period;
import java.time.format.DateTimeFormatter;
import java.time.format.DateTimeParseException;
import java.util.Scanner;

public class EmployeeExperience {

    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        System.out.print("Enter Employee Name: ");
        String name = scanner.nextLine();

        System.out.print("Enter Employee Designation: ");
        String designation = scanner.nextLine();

        LocalDate joiningDate = null;
        DateTimeFormatter formatter =
                DateTimeFormatter.ofPattern("dd-MM-yyyy");

        while (joiningDate == null) {
            System.out.print("Enter Joining Date (dd-MM-yyyy): ");
            String dateInput = scanner.nextLine();

            try {
                joiningDate = LocalDate.parse(dateInput, formatter);

                if (joiningDate.isAfter(LocalDate.now())) {
                    System.out.println(
                        "Joining date cannot be in the future. Please re-enter.");
                    joiningDate = null;
                }
            } catch (DateTimeParseException e) {
                System.out.println(
                    "Invalid date format. Please use dd-MM-yyyy.");
            }
        }

        LocalDate today = LocalDate.now();
        Period experience = Period.between(joiningDate, today);

        int years = experience.getYears();
        int months = experience.getMonths();
        int days = experience.getDays();

        System.out.println("\n----- Employee Details -----");
        System.out.println("Name        : " + name);
        System.out.println("Designation : " + designation);
        System.out.println("Joining Date: " + joiningDate.format(formatter));
        System.out.println("Today's Date: " + today.format(formatter));
        System.out.println("Experience  : " + years + " years, "
                + months + " months, " + days + " days");

        scanner.close();
    }
}
```

Sample Output

```
Enter Employee Name: Ravi
Enter Employee Designation: Software Engineer
```

```
Enter Joining Date (dd-MM-yyyy): 15-06-2020

----- Employee Details -----
Name        : Ravi
Designation : Software Engineer
Joining Date: 15-06-2020
Today's Date: 09-09-2026
Experience  : 6 years, 2 months, 25 days
```

Conclusion

The program successfully accepts employee information, validates the joining date, and calculates the employee's total experience accurately up to the current date.
